# **PRODUCT** INFORMATION

AT7519 (hydrochloride)

Item No. 16231

CAS Registry No.:	902135-91-5	H
Formal Name:	4-[(2,6-dichlorobenzoyl)amino]-	
	N-4-piperidinyl-1H-pyrazole-3-	H
	carboxamide, monohydrochloride	N
MF:	$C_{16}H_{17}CI_2N_5O_2 \bullet HCI$	H_N HCI
FW:	418.7	
Purity:	≥98%	N CI
UV/Vis.:	λ <sub>max</sub> : 268 nm	н Халан
Supplied as:	A crystalline solid	
Storage:	-20°C	
Stability:	≥4 years	
Information memory to the manda of an arithmetic provide an arithmetic provided and an area in artificate a		

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

#### Laboratory Procedures

AT7519 (hydrochloride) is supplied as a crystalline solid. A stock solution may be made by dissolving the AT7519 (hydrochloride) in the solvent of choice. AT7519 (hydrochloride) is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide, which should be purged with an inert gas. The solubility of AT7519 (hydrochloride) in these solvents is approximately 5, 25, and 20 mg/ml, respectively.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of AT7519 (hydrochloride) can be prepared by directly dissolving the crystalline solid in aqueous buffers. The solubility of AT7519 (hydrochloride) in PBS, pH 7.2, is approximately 0.5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

#### Description

AT7519 is an ATP-competitive inhibitor of cyclin-dependent kinases (Cdks) with IC<sub>50</sub> values of 210, 47, 100, 13, 170, and <10 nM for Cdk1, 2, 4, 5, 6, and 9, respectively.<sup>1</sup> It is less potent against Cdk3 and Cdk7 and inactive against non-Cdk kinases save for GSK3 $\beta$  (IC<sub>50</sub> = 89 nM).<sup>1</sup> AT7519 demonstrates antiproliferative activity against a wide variety of human tumor cell lines (IC<sub>50</sub>s = 40-940 nM *in vitro*), inhibiting cell cycle progression and inducing apoptosis, and prevents tumor growth in human tumor xenograft models.<sup>1,2</sup> AT7519 induces activation of GSK3 $\beta$  by down-regulating GSK3 $\beta$  phosphorylation, which contributes to AT7519-induced apoptosis.<sup>2</sup>

WARNING THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

#### SAFFTY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

#### WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
