PRODUCT INFORMATION

PTC-124

Item No. 16758

CAS Registry No.:	775304-57-9	
Formal Name:	3-[5-(2-fluorophenyl)-1,2,4-	
	oxadiazol-3-yl]-benzoic acid	
Synonym:	Ataluren	
MF:	C ₁₅ H ₉ FN ₂ O ₃	
FW:	284.3	
Purity:	≥98%	
UV/Vis.:	λ _{max} : 242 nm	-0
Supplied as:	A crystalline solid	F F
Storage:	-20°C	
Stability:	≥2 years	

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

PTC-124 is supplied as a crystalline solid. A stock solution may be made by dissolving the PTC-124 in the solvent of choice. PTC-124 is soluble in organic solvents such as DMSO and dimethyl formamide, which should be purged with an inert gas. The solubility of PTC-124 in these solvents is approximately 30 mg/ml.

PTC-124 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, PTC-124 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. PTC-124 has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

Nonsense mutations create a premature termination of mRNA translation and have been implicated in various genetic disorders, including muscular dystrophy and cystic fibrosis.¹ PTC-124 is a nonaminoglycoside that has been reported to selectively induce ribosomes to read through premature nonsense stop signals on mRNA, thus allowing the production of full length, functional proteins.¹ In a mouse model of cystic fibrosis caused by nonsense mutations, PTC-124 treatment (60 mg/kg s.c. injection or 0.3-0.9 mg/ml orally) has been shown to restore cystic fibrosis transmembrane conductance regulator (CFTR) protein expression and function.² The target activity of PTC-124 was initially evaluated by firefly luciferase reporter cell-based nonsense codon assay (IC₅₀ = 7 nM); however, subsequent assessments using a Renilla reniformis luciferase reporter have failed to produce nonsense codon suppression activity.³ Thus, while PTC-124 is in clinical testing in patients with nonsense mutations within the CFTR or dystrophin genes, controversy surrounds its exact mechanism of action.1,3-5
