Laboratory Procedures

GSK650394 is supplied as a crystalline solid. A stock solution may be made by dissolving the GSK650394 in the solvent of choice, which should be purged with an inert gas. GSK650394 is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of GSK650394 in these solvents is approximately 30 mg/ml, respectively.

GSK650394 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, GSK650394 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. GSK650394 has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

GSK650394 is an inhibitor of serum- and glucocorticoid-regulated kinase (IC₅₀s = 62 and 103 nM for SGK1 and SGK2, respectively).¹ It demonstrates greater than 30-fold selectivity for SGK1 over Akt and other related kinases.¹ GSK650394 can inhibit the androgen-stimulated growth of human prostate carcinoma LNCaP cells with an IC₅₀ value of ~ 1 μM.¹
