# PRODUCT INFORMATION

## Oleocanthal

Item No. 17496

CAS Registry No.: 289030-99-5

Formal Name: (3S,4E)- 4-formyl-3-(2-oxoethyl)-4-hexenoic acid, 2-(4-hydroxyphenyl)ethyl ester

Synonym: (-)-Oleocanthal

MF: C<sub>17</sub>H<sub>20</sub>O<sub>5</sub>

FW: 304.3

Purity: ≥95%

Supplied as: A neat oil

Storage: -20°C

Stability: ≥4 years

Item Origin: Plant/*Olea europaea*

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

## Laboratory Procedures

Oleocanthal is supplied as a neat oil. A stock solution may be made by dissolving the oleocanthal in the solvent of choice, which should be purged with an inert gas. Oleocanthal is soluble in DMSO and acetonitrile.

## Description

Oleocanthal is a secoiridoid polyphenol that has been found in *O. europaea* and has diverse biological activities.<sup>1-4</sup> It inhibits the proliferation of CWR-R1ca, PC3, PC-3M, and DU145 prostate cancer cells ( $IC_{50}$ s = 3.59, 0.64, 1.03, and 5.35  $\mu$ M, respectively).<sup>1</sup> Oleocanthal inhibits the growth of *L. major* promastigotes and amastigotes *in vitro* ( $IC_{50}$ s = 18.7 and 87  $\mu$ g/ml, respectively) and reduces lymph node parasite burden in a mouse model of leishmaniasis when administered at a dose of 5 mg/kg.<sup>2</sup> Oleocanthal (5 mg/kg) reduces hippocampal amyloid- $\beta$  (A $\beta$ ) levels in a TgSwDI transgenic mouse model of Alzheimer's disease.<sup>3</sup> Intragastric administration of oleocanthal (5 mg/kg) decreases serum IL-6 and TNF- $\alpha$  levels and reduces lung cell apoptosis in a chicken model of LPS-induced acute lung injury.<sup>4</sup>
