## Laboratory Procedures

GSK923295 is supplied as a crystalline solid. A stock solution may be made by dissolving the GSK923295 in the solvent of choice. GSK923295 is soluble in organic solvents such as DMSO and dimethyl formamide, which should be purged with an inert gas. The solubility of GSK923295 in these solvents is approximately 30 mg/ml.

GSK923295 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, GSK923295 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. GSK923295 has a solubility of approximately 0.25 mg/ml in a 1:3 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

## Description

GSK923295 is a potent inhibitor of centromere-associated protein E (CENP-E; K<sub>i</sub> = 3.2 nM), a kinesin motor protein involved in mitotic checkpoint signaling.<sup>1,2</sup> GSK923295 causes mitotic cell cycle delay, leading to apoptosis in various cancer cell lines.<sup>1</sup> It induces apoptosis in cancer cells in mice bearing xenografts of COLO 205 cells.<sup>1,2</sup> GSK923295 can be used with AZ3146, an inhibitor of the spindle checkpoint kinase Mps1, to generate aneuploidy in cells.<sup>3</sup>
