PRODUCT INFORMATION

Ravuconazole

Item No. 18750

| CAS Registry No.: | 182760-06-1 | F | |
|-------------------|---|--------------------|---|
| Formal Name: | 4-[2-[(1R,2R)-2-(2,4-difluorophenyl)-2- | | |
| | hydroxy-1-methyl-3-(1H-1,2,4-triazol- | | |
| | 1-yl)propyl]-4-thiazolyl]-benzonitrile | | |
| Synonyms: | BMS 207147, ER-30346 | | |
| MF: | $C_{22}H_{17}F_{2}N_{5}OS$ | | |
| FW: | 437.5 | | |
| Purity: | ≥98% | | |
| UV/Vis.: | λ _{max} : 285 nm | ▲ [↓] N × | |
| Supplied as: | A crystalline solid | N, | |
| Storage: | -20°C | \ <u>\</u> // | |
| Stability: | ≥2 years | | |
| | | | , |

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Ravuconazole is supplied as a crystalline solid. A stock solution may be made by dissolving the ravuconazole in the solvent of choice. Ravuconazole is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of ravuconazole in these solvents is approximately 5, 20, and 25 mg/ml, respectively.

Ravuconazole is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, ravuconazole should first be dissolved in DMF and then diluted with the aqueous buffer of choice. Ravuconazole has a solubility of approximately 0.25 mg/ml in a 1:4 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

Ravuconazole is an orally available triazole fungicide that potently inhibits the growth of a wide range of fungi (MICs range from 25 to 780 ng/ml).^{1,2} Like other azoles, ravuconazole inhibits cytochrome P450 (CYP) isoforms that are involved in ergosterol biosynthesis, interfering with the generation of the fungal and protozoan cell membranes.³ Ravuconazole specifically inhibits sterol 14α-demethylase (CYP51).^{4,5} As this enzyme is also important in the development of trypanosomes, ravuconazole is effective against T. cruzi infections in animal models of Chagas disease.^{4,5}
