PRODUCT INFORMATION

Fulvic Acid

Item No. 19063

CAS Registry No.: 479-66-3
Formal Name: 4,10-dihydro-3,7,8-trihydroxy-3-methyl-10-oxo-1H,3H-pyrano[4,3-b][1]benzopyran-9-carboxylic acid
MF: C₁₄H₁₂O₈
FW: 308.2
Purity: ≥98%
Supplied as: A solid
Storage: -20°C
Stability: ≥2 years
Item Origin: Fungi/*Penicillium* sp. FKP-0046

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Fulvic acid is supplied as a solid. A stock solution may be made by dissolving the fulvic acid in the solvent of choice. Fulvic acid is soluble in organic solvents such as methanol and chloroform, which should be purged with an inert gas.

Description

Fulvic acid is a phenolic acid and fungal metabolite originally isolated from *Penicillium*.¹ Fulvic acids are formed via degradation of organisms and their wastes and are classified as humic substances, which are present in soil and water, can form complexes with metals, and can act as oxidizers or reducers.^{2,3} Fulvic acid is predicted to inhibit amyloid- β (17-42) ($A\beta_{17-42}$) dimerization, disrupt preformed $A\beta_{17-42}$ trimers, and bind to the catalytic site of phosphodiesterase 5A (PDE5A) based on molecular dynamics simulation studies.^{4,5}

WARNING

THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
