Laboratory Procedures

IDO-IN-1 is supplied as a crystalline solid. A stock solution may be made by dissolving the IDO-IN-1 in the solvent of choice. IDO-IN-1 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide, which should be purged with an inert gas. The solubility of IDO-IN-1 in these solvents is approximately 10 mg/ml.

IDO-IN-1 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, IDO-IN-1 should first be dissolved in ethanol and then diluted with the aqueous buffer of choice. IDO-IN-1 has a solubility of approximately 0.025 mg/ml in a 1:30 solution of ethanol:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

IDO-IN-1 is a potent indoleamine 2,3-dioxygenase (IDO) inhibitor that demonstrates IC₅₀ values of 59 and 12 nM for human IDO enzymatic activity and HeLa cell assays, respectively.¹ It is inactive against tryptophan 2,3-dioxygenase (TOD; IC₅₀ > 10 μM).
