Laboratory Procedures

SKQ1 (bromide) is supplied as a solution in ethanol and water (1:1). To change the solvent, simply evaporate the SKQ1 (bromide) under a gentle stream of nitrogen and immediately add the solvent of choice. SKQ1 (bromide) is miscible in ethanol.

Description

SKQ1 (bromide) is a mitochondria-targeted antioxidant that decreases transmembrane potential and production of reactive oxygen species (ROS).¹ SKQ1 prevents neuronal loss and synaptic damage in a rat model of spontaneous Alzheimer's disease, as well as decreases severity of arthritic lesions in rats.^{2,3} SKQ1 slows development of age-related ocular pathologies in murine, porcine, bovine, and canine model systems.⁴ It also prevents acute phenoptosis following rhabdomyolysis, stroke, and myocardial infarction.⁵⁻⁷
