Laboratory Procedures

TP-064 is supplied as a crystalline solid. A stock solution may be made by dissolving the TP-064 in the solvent of choice. TP-064 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide, which should be purged with an inert gas. The solubility of TP-064 in these solvents is approximately 30 mg/ml.

Description

TP-064 is a potent inhibitor of protein arginine methyltransferase 4 (PRMT4; IC₅₀ < 10 nM) that is greater than 100-fold selective over other histone methyltransferases and non-epigenetic targets. It also inhibits methylation of the RNA polymerase II mediator complex subunit 12 (MED12; IC₅₀ = 43 nM) *in vitro*. For more information on TP-064 please visit the Structural Genomics Consortium (SGC). The negative control, TP-064N, for TP-064 is also available exclusively through the SGC.
