Laboratory Procedures

HC-067047 is supplied as a crystalline solid. A stock solution may be made by dissolving the HC-067047 in the solvent of choice. HC-067047 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of HC-067047 in these solvents is approximately 1, 15, and 20 mg/ml, respectively.

HC-067047 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, HC-067047 should first be dissolved in DMF and then diluted with the aqueous buffer of choice. HC-067047 has a solubility of approximately 0.33 mg/ml in a 1:2 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

HC-067047 is a TRPV4 antagonist that reversibly inhibits currents through human, rat, and mouse TRPV4 orthologs (IC₅₀s = 48, 133, and 17 nM, respectively).¹ It is selective for TRPV4 over TRPV1, TRPV2, TRPV3, and TRPM8 channels.¹ HC-067047 has been shown to increase functional bladder capacity and to reduce micturition frequency in wild-type mice and rats with cystitis.¹
