### Laboratory Procedures

EB 1089 is supplied as a crystalline solid. A stock solution may be made by dissolving the EB 1089 in the solvent of choice, which should be purged with an inert gas. EB 1089 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of EB 1089 in ethanol and DMSO is approximately 30 mg/ml and approximately 25 mg/ml in DMF.

EB 1089 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, EB 1089 should first be dissolved in ethanol and then diluted with the aqueous buffer of choice. EB 1089 has a solubility of approximately 0.33 mg/ml in a 1:2 solution of ethanol:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

EB 1089 is a synthetic vitamin D analog that is 50-200 times more potent than calcitriol (Item No. 71820) at inhibiting cell proliferation and differentiation, yet displays reduced calcemic activity compared to that of calcitriol.<sup>1</sup> It has been shown to promote tumor regression *in vitro* by inducing apoptosis.<sup>2</sup>
