### Laboratory Procedures

BRD6125 is supplied as a crystalline solid. A stock solution may be made by dissolving the BRD6125 in the solvent of choice, which should be purged with an inert gas. BRD6125 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of BRD6125 in ethanol is approximately 1 mg/ml and approximately 30 mg/ml in DMSO and DMF.

BRD6125 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, BRD6125 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. BRD6125 has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

BRD6125, also known as functional proliferation hits 1 (FPH1), is a small molecule that increases the number and activity of hepatocytes *in vitro*.<sup>1</sup> It dramatically increases expansion of primary human hepatocytes and induces maturation of hepatocyte-like cells (iHeps). It also induces maturation in two pluripotent cell lines.
