Laboratory Procedures

Docetaxel-d₉ is intended for use as an internal standard for the quantification of docetaxel (Item No. 11637) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Docetaxel-d₉ is supplied as a solid. Docetaxel-d₉ is slightly soluble in chloroform and methanol.

Description

Docetaxel is a semisynthetic analog of paclitaxel (Item No. 10461) that inhibits microtubule disassembly ($IC_{50} = 0.2 \mu M$) and inhibits cell replication ($IC_{50} = 0.13 \mu M$).¹ It has proven more effective than paclitaxel in preventing the proliferation of cancer cells.^{1,2} Docetaxel has potential applications in breast cancer and hormone-refractory prostate cancer.^{3,4}
