# PRODUCT INFORMATION

**LY2090314**

Item No. 22211

**CAS Registry No.:** 603288-22-8  
**Formal Name:** 3-[9-fluoro-1,2,3,4-tetrahydro-2-(1-piperidinylcarbonyl)pyrrolo[3,2,1-jk][1,4]benzodiazepin-7-yl]-4-imidazo[1,2-a]pyridin-3-yl-1H-pyrrole-2,5-dione

**MF:** C<sub>28</sub>H<sub>25</sub>FN<sub>6</sub>O<sub>3</sub>  
**FW:** 512.5  
**Purity:** ≥98%  
**UV/Vis.:** λ<sub>max</sub>: 213 nm  
**Supplied as:** A crystalline solid  
**Storage:** -20°C  
**Stability:** ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

## Laboratory Procedures

LY2090314 is supplied as a crystalline solid. A stock solution may be made by dissolving the LY2090314 in the solvent of choice. LY2090314 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of LY2090314 in ethanol is approximately 0.25 mg/ml and approximately 10 mg/ml in DMSO and DMF.

LY2090314 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, LY2090314 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. LY2090314 has a solubility of approximately 0.16 mg/ml in a 1:5 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

## Description

LY2090314 is potent and selective inhibitor of glycogen synthase kinase 3 (GSK3) with IC<sub>50</sub> values of 1.5 and 0.9 nM for human recombinant GSK3α and GSK3β, respectively.<sup>1</sup> It has >10-fold selectivity for GSK3 over a panel of 40 kinases at a concentration of 20 μM. LY2090314 induces time-dependent stabilization of β-catenin total protein and activates Wnt signaling *in vitro*. It has potent antiproliferative activity in BRAF wild-type/NRAS mutant and BRAF mutant melanoma cell lines (IC<sub>50</sub>s = 6.0-11.8 nM) but has limited to no activity in non-melanoma cell lines with (IC<sub>50</sub>s = 430 to >20,000 nM). Knockdown of β-catenin in A375 and M14 melanoma cells induces LY2090314 resistance *in vitro*, indicating that LY2090314-induced cell death is dependent upon Wnt activation. *In vivo*, LY2090314 reduces tumor volume in a murine A375 melanoma xenograft model as a single agent and synergizes with decabazine for a greater antitumor effect. Formulations containing LY2090314 are under clinical investigation for the treatment of advanced solid tumors.<sup>2</sup>

### WARNING

THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

### SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the [complete](#) Safety Data Sheet, which has been sent via email to your institution.

### WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
