Laboratory Procedures

C16 Phytoceramide (t18:0/16:0) is supplied as a solid. A stock solution may be made by dissolving the C16 phytoceramide (t18:0/16:0) in the solvent of choice. C16 Phytoceramide (t18:0/16:0) is soluble in a 5:1 solution of chloroform:methanol.

Description

C16 Phytoceramide (t18:0/16:0) is a phytoceramide, which is a family of sphingolipids found in the intestine, kidney, and extracellular spaces of the stratum corneum of the mammalian epidermis.¹⁻³ C16 Phytoceramide (t18:0/16:0) is composed of a phytosphingosine (Item No. 20217) backbone amine-linked to a C16 fatty acid chain. The levels of C16 phytoceramide (t18:0/16:0) increase following heat stress in *S. cerevisiae*.⁴ It has been used with other ceramides to create stratum corneum substitutes to study percutaneous penetration and psoriasis *in vitro*.^{5,6}
