PRODUCT INFORMATION

BM212

Item No. 22986

CAS Registry No.: 146204-42-4
Formal Name: 1-[[1,5-bis(4-chlorophenyl)-2-methyl-1H-pyrrol-3-yl]methyl]-4-methyl-piperazine
MF: C₂₃H₂₅Cl₂N₃
FW: 414.4
Purity: ≥98%
UV/Vis.: λ_{max}: 247, 297 nm
Supplied as: A crystalline solid
Storage: -20°C
Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

BM212 is supplied as a crystalline solid. A stock solution may be made by dissolving the BM212 in the solvent of choice. BM212 is soluble in organic solvents such as ethanol and dimethyl formamide, which should be purged with an inert gas. The solubility of BM212 in these solvents is approximately 0.5 mg/ml.

Description

BM212 is an antimycobacterial compound.¹ It inhibits the growth of laboratory and clinical isolate *M. tuberculosis* strains (MICs = 0.7-1.5 µg/ml), including strains resistant to ethambutol (Item No. 23713), isoniazid (Item No. 20378), rifampicin (Item No. 14423), and rifabutin (Item No. 16468). BM212 also inhibits the growth of *M. fortuitum*, *M. smegmatis*, *M. kansasii*, and *M. avium* strains (MICs = 3.1-12.5, 3.1-25, 3.1-6.2, and 0.4-3.1 µg/ml, respectively). It inhibits replication of intracellular *M. tuberculosis* in infected U937 macrophages in a dose-dependent manner at concentrations ranging from 0.5-10 µg/ml. Some *M. smegmatis*, *M. bovis* BCG, and *M. tuberculosis* H37Rv mutant strains carry mutations in the mycobacterium membrane protein large 3 (mmpL3) gene and are resistant to BM212, indicating mmpL3 is likely a cellular target of BM212.²
