Laboratory Procedures

Aloin B is supplied as a crystalline solid. A stock solution may be made by dissolving the aloin B in the solvent of choice. Aloin B is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of aloin B in ethanol is approximately 0.25 mg/ml and approximately 30 mg/ml in DMSO and DMF.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of aloin B can be prepared by directly dissolving the crystalline solid in aqueous buffers. The solubility of aloin B in PBS, pH 7.2, is approximately 0.5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description

Aloin B is an anthraquinone found in *Aloe vera* and a component of racemic aloin (Item No. 22435).¹
