PRODUCT INFORMATION

L-Folinic Acid (calcium salt)

Item No. 23833

CAS Registry No.: 80433-71-2
Formal Name: N-[4-[[[(6S)-2-amino-5-formyl-3,4,5,6,7,8-hexahydro-4-oxo-6-pteridiny]]methyl]amino]benzoyl]-L-glutamic acid, monocalcium salt
Synonyms: L-Folinate
MF: $C_{20}H_{21}N_7O_7 \cdot Ca$
FW: 511.5
Purity: $\geq 98\%$
UV/Vis.: λ_{max} : 221, 287 nm
Supplied as: A crystalline solid
Storage: $-20^{\circ}C$
Stability: ≥ 2 years
Item Origin: Synthetic

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

L-Folinic acid (calcium salt) is supplied as a crystalline solid. A stock solution may be made by dissolving the L-folinic acid (calcium salt) in water. The solubility of L-folinic acid (calcium salt) in water is approximately 0.3 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description

L-Folinic acid is a reduced folic acid and isomer of DL-folinic acid (Item No. 20383).¹ DL-Folinic acid is a racemic mixture of D-folinic acid and L-folinic acid that has been used to prevent toxicity following therapy with high-dose methotrexate (Item No. 13960), to enhance the antitumor activity of 5-fluorouracil (Item No. 14416), and as a folate supplement.^{2,3} Clinical studies demonstrate that formulations containing L-folinic acid have similar efficacy and tolerability as those containing D,L-folinic acid and have been used interchangeably for modification of antitumor activity of 5-fluorouracil, while D-folinic acid is inactive.¹
