#### Laboratory Procedures

NS 11394 is supplied as a crystalline solid. A stock solution may be made by dissolving the NS 11394 in the solvent of choice, which should be purged with an inert gas. NS 11394 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of NS 11394 in these solvents is approximately 33 mg/ml.

NS 11394 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, NS 11394 should first be dissolved in ethanol and then diluted with the aqueous buffer of choice. NS 11394 has a solubility of approximately 0.16 mg/ml in a 1:5 solution of ethanol:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

#### Description

NS 11394 is an orally bioavailable positive allosteric modulator of the GABAA receptor (K<sub>i</sub> = 0.423 nM in rat cortical membranes).<sup>1</sup> It is selective for GABA<sub>A</sub> receptors containing  $\alpha_1$ ,  $\alpha_2$ ,  $\alpha_3$ , or  $a_5$  subunits (K<sub>1</sub>s = 0.41, 0.84, 0.497, and 0.119 nM, respectively) over receptors containing  $a_4$  or  $a_6$ subunits (K.s = 324 or 1,009 nM, respectively). In X. laevis oocytes, NS 11394 modulates GABA responses via receptors containing the subunits  $\alpha_3$  and  $\alpha_5$ , with maximal potentiation rates of 52% and 78%, respectively, relative to diazepam (Item No. ISO60177). In vivo, NS 11394 inhibits the binding of  $[^{3}H]$ flunitrazepam to benzodiazepine receptors in the forebrain of mice and rats, with respective  $EC_{50}$  values of 0.38 and 1.3 mg/kg at 30 minutes and 0.49 and 0.69 mg/kg at 120 minutes following oral administration. NS 11394 (1-30 mg/kg) attenuates spontaneous nociceptive behaviors to formalin and capsaicin (Item No. 92350) injections in a rat model of neuropathic pain.<sup>2</sup>
