Laboratory Procedures

Cyazofamid is supplied as a solid. A stock solution may be made by dissolving the cyazofamid in the solvent of choice, which should be purged with an inert gas. Cyazofamid is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of cyazofamid in these solvents is approximately 10 and 15 mg/ml, respectively.

Description

Cyazofamid is a fungicide.¹ It is active against several isolates of *P. infestans*, as well as *P. sojae*, *P. aphanidermatum*, *P. paddicum*, *P. sylvaticum*, and *A. cochlioides* (EC_{50} s = 0.008-0.03, 0.2, 0.02, 0.2, 0.2, and 0.2 μ g/ml, respectively). Cyazofamid (10 μ M) selectively inhibits *P. spinosum* mitochondrial complex III, also known as cytochrome bc_1 complex, activity over *B. cinerea*, *S. cerevisiae*, potato tuber, and rat liver mitochondrial complex III activities.² It protects against *P. brassicae*-induced root hair infections in cabbage when applied to dry soil at a dose of 10 mg/kg.³ Formulations containing cyazofamid have been used as fungicides in agriculture.
