PRODUCT INFORMATION

Diniconazole

Item No. 24248

CAS Registry No.: 83657-24-3
Formal Name: β E-[(2,4-dichlorophenyl)methylene]- α -(1,1-dimethylethyl)-1H-1,2,4-triazole-1-ethanol
Synonyms: Rac-diniconazole, S-3308
MF: $C_{15}H_{17}Cl_2N_3O$
FW: 326.2
Purity: $\geq 98\%$
Supplied as: A solid
Storage: $-20^{\circ}C$
Stability: ≥ 4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Diniconazole is supplied as a solid. A stock solution may be made by dissolving the diniconazole in the solvent of choice, which should be purged with an inert gas. Diniconazole is slightly soluble in DMSO and methanol.

Description

Diniconazole is a broad-spectrum triazole fungicide that inhibits ergosterol biosynthesis *via* inhibition of the cytochrome P450-dependent 14 α -demethylation of lanosterol, which results in disruption of the fungal cell membrane and cell death.¹ It is fungicidal against *B. cinerea*, *S. fimicola*, *F. graminearum*, *S. cepivorum*, and *B. sorokiniana* (EC_{50} s = 0.012, <0.001, 0.008, 0.02, and 0.06 mg/l, respectively).² Diniconazole acts as a plant growth regulator, decreasing height and leaf area in bean plants when applied to roots at a concentration of 5 mg/l. It exhibits dose-dependent toxicity in zebrafish.³
