Laboratory Procedures

C18 Galactosylceramide-d₃₅ (d18:1/18:0-d₃₅) is intended for use as an internal standard for the quantification of C18 galactosylceramide by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

C18 Galactosylceramide-d₃₅ (d18:1/18:0-d₃₅) is supplied as a solid. A stock solution may be made by dissolving the C18 galactosylceramide-d₃₅ (d18:1/18:0-d₃₅) in the solvent of choice. C18 Galactosylceramide-d₃₅ (d18:1/18:0-d₃₅) is soluble in ethanol (hot), chloroform, and a 2:1 solution of chloroform:methanol.

Description

C18 Galactosylceramide is a naturally occurring sphingolipid that has been found in the cerebellum of rats and humans.^{1,2} It is selectively localized with cholesterol over potassium, sodium, or phosphocholine in rat cerebellum white matter.¹
