Description

IMP-1088 is an inhibitor of N-myristoyltransferase 1 (NMT1) and NMT2 (IC₅₀ = <1 nM for both human enzymes).¹ It inhibits replication of rhinovirus (RV), the virus most commonly responsible for the common cold, by inhibiting myristoylation of the RV capsid protein VP0 from strain RV-A16 in HeLa cells. IMP-1088 (500 nM) reduces RV-A16, RV-A1, RV-B14, and RV-A28 viral titers in HeLa cells without affecting cell growth (IC₅₀ = >1,000 nM). It also blocks production of infectious RV-16 virus in primary human bronchial epithelial cells (hBECs) when added 3 hours post infection *via* inhibition of viral capsid assembly.
