PRODUCT INFORMATION

VU0467154

Item No. 25555

CAS Registry No.: 1451993-15-9

Formal Name: 5-amino-3,4-dimethyl-N-[[4-
[(trifluoromethyl)sulfonyl]phenyl]
methyl]-thieno[2,3-c]pyridazine-6-
carboxamide

MF: C₁₇H₁₅F₃N₄O₃S₂

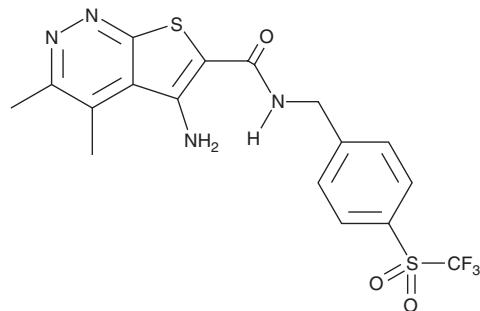

FW: 444.5

Purity: ≥95%

Supplied as: A solid

Storage: -20°C

Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

VU0467154 is supplied as a solid. A stock solution may be made by dissolving the VU0467154 in the solvent of choice, which should be purged with an inert gas. VU0467154 is soluble in the organic solvent DMSO.

Description

VU0467154 is a positive allosteric modulator of the M₄ muscarinic acetylcholine receptor that potentiates acetylcholine responses in CHO cells expressing M₄ receptors (EC₅₀s = 17.7, 630, and 1,000 nM for rat, human, and cynomolgus monkey receptors, respectively).¹ It is selective for M₄ over M₁₋₃ and M₅ receptors and a panel of receptors, transporters, and cation channels when used at a concentration of 10 μM. *In vivo*, VU0467154 (3-56.6 mg/kg, p.o.) reverses amphetamine-induced hyperlocomotion in rats. It reverses MK-801-induced hyperlocomotion, deficits in a pairwise visual discrimination task, and impairments in the acquisition of contextual fear conditioning in wild-type, but not M₄ knockout, mice. VU0467154 (3-30 mg/kg) also increases freezing behavior in contextual and tone fear conditioning tests in wild-type mice when administered prior to the conditioning session. Chronic administration of VU0467154 (10 mg/kg once daily) reduces motor incoordination and prevents decreases in locomotion in the YAC128 transgenic mouse model of Huntington's disease.²
