PRODUCT INFORMATION

Cholesteryl Hemisuccinate

Item No. 25698

CAS Registry No.: 1510-21-0
Formal Name: (3 β)-cholest-5-en-3-ol 3-(hydrogen butanedioate)
Synonym: Cholesteryl hydrogen succinate
MF: C₃₁H₅₀O₄
FW: 486.7
Purity: $\geq 95\%$
Supplied as: A crystalline solid
Storage: -20°C
Stability: ≥ 4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Cholesteryl hemisuccinate is supplied as a crystalline solid. A stock solution may be made by dissolving the cholesteryl hemisuccinate in the solvent of choice, which should be purged with an inert gas. Cholesteryl hemisuccinate is soluble in the organic solvent chloroform at a concentration of approximately 10 mg/ml.

Description

Cholesteryl hemisuccinate is a cholesterol ester with anticancer activity.¹ It inhibits the growth of murine C1498 myeloid and L1210 lymphocytic leukemia cells when used at concentrations of 50 and 150 μ M, respectively.¹ Cholesteryl hemisuccinate acts as an ionizable anionic detergent and is commonly used to stabilize unilamellar vesicles and liposomes.² It has also been used as an emulsifying agent in various vesicular drug delivery systems for anticancer drugs, antibiotics, and oligonucleotides and to solubilize various proteins including chemokine receptor 1 as well as erythrocyte ghosts.³⁻⁵
