Laboratory Procedures

Aurantioobtusin is supplied as a crystalline solid. A stock solution may be made by dissolving the aurantioobtusin in the solvent of choice, which should be purged with an inert gas. Aurantioobtusin is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of aurantioobtusin in ethanol is approximately 1 mg/ml and approximately 10 mg/ml in DMSO and DMF.

Description

Aurantioobtusin is an anthraquinone originally isolated from *Cassia* seeds with diverse biological activities.¹⁻⁵ It inhibits rat lens aldose reductase (RLAR) *in vitro* (IC₅₀ = 13.6 μM).¹ Aurantioobtusin (10 and 100 μM) activates the aryl hydrocarbon receptor (AhR) in a concentration-dependent manner.² It inhibits rat platelet aggregation induced by arachidonic acid (Item Nos. 90010 | 90010.1 | 10006607), ADP, and collagen.³ Aurantioobtusin induces vasorelaxation in isolated precontracted rat mesenteric artery rings, an effect that is inhibited by the PI3K inhibitor LY290042 or inhibition of endothelial nitric oxide synthase (eNOS).⁴ It is larvicidal against *A. gambiae* mosquitoes (LD₅₀ = 10 ppm).⁵
