PRODUCT INFORMATION

Alaproclate (hydrochloride)

Item No. 27770

CAS Registry No.: 60719-83-7
Formal Name: alanine, 2-(4-chlorophenyl)-1,1-dimethylethyl ester, monohydrochloride
Synonyms: GEA 654, A03
MF: C₁₃H₁₈ClNO₂ • HCl
FW: 292.2
Purity: ≥95%
UV/Vis.: λ_{max}: 222 nm
Supplied as: A crystalline solid
Storage: -20°C
Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Alaproclate (hydrochloride) is supplied as a crystalline solid. A stock solution may be made by dissolving the alaproclate (hydrochloride) in water. We do not recommend storing the aqueous solution for more than one day.

Description

Alaproclate is a selective serotonin reuptake inhibitor (SSRI).^{1,2} It inhibits depletion of serotonin (5-HT) induced by 4-methyl- α -ethyl-*m*-tyramine in rat cerebral cortex, hippocampus, hypothalamus, and striatum (EC₅₀s = 18, 4, 8, and 12 mg/kg, respectively).¹ Alaproclate inhibits NMDA-evoked currents and depolarization-induced voltage-dependent potassium currents in rat hippocampal neurons (IC₅₀s = 1.1 and 6.9 μ M, respectively) and does not inhibit GABA-evoked currents when used at concentrations up to 100 μ M.² It increases sirtuin 1 (SIRT1) levels in N2a murine neuroblastoma cells expressing apolipoprotein E4 (ApoE4; IC₅₀ = 2.3 μ M) and in the hippocampus in the FXFAD-ApoE4 transgenic mouse model of Alzheimer's disease when administered at a dose of 20 mg/kg twice daily.³ Alaproclate (40 mg/kg) decreases immobility time in the forced swim test in rats, indicating antidepressant-like activity.⁴
