### Laboratory Procedures

Tizoxanide-d<sub>4</sub> is intended for use as an internal standard for the quantification of tizoxanide (Item No. 13693) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Tizoxanide-d<sub>4</sub> is supplied as a solid. A stock solution may be made by dissolving the tizoxanide-d<sub>4</sub> in the solvent of choice, which should be purged with an inert gas. Tizoxanide-d<sub>4</sub> is soluble in DMSO and methanol.

### Description

Tizoxanide is an active metabolite of the antiparasitic nitazoxanide (Item No. 13692).<sup>1</sup> Tizoxanide is formed from nitazoxanide via deacetylation of nitazoxanide in the stomach. It is active against *M. tuberculosis* (MIC = 16 µg/ml). It also reduces the growth of the disease-causing parasites *L. mexicana* and *T. cruzi* *in vitro* (IC<sub>50</sub>s = 6.2 and 17.5 µM, respectively), inhibits influenza A replication (EC<sub>50</sub>s = 0.3-1 µM), and inhibits hepatitis B and hepatitis C virus replication (EC<sub>50</sub> = 0.15 µM for both).<sup>2-4</sup>
