Laboratory Procedures

JNK inhibitor VII is supplied as a crystalline solid. A stock solution may be made by dissolving the JNK inhibitor VII in the solvent of choice, which should be purged with an inert gas. JNK inhibitor VII is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of JNK inhibitor VII in these solvents is approximately 10 mg/ml. JNK inhibitor VII is also slightly soluble in ethanol.

JNK inhibitor VII is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, JNK inhibitor VII should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. JNK inhibitor VII has a solubility of approximately 0.3 mg/ml in a 1:2 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

JNK inhibitor VII is a potent and non-selective inhibitor of JNKs (IC₅₀s = 1.54, 1.99, and 0.75 nM for JNK1, -2, and -3, respectively).¹ It inhibits phosphorylation of c-Jun in HeLa and A375 cells (EC₅₀s = 130 and 244 nM, respectively).
