# PRODUCT INFORMATION

## Neutral Glycosphingolipid Mixture

Item No. 29358

**Supplied as:** A solution in chloroform:methanol (2:1)

**Storage:** -20°C

**Stability:** ≥1 year

**Concentration:** 1 mg/ml

*Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.*

### Description and Data

Galactosylceramides, lactosylceramides, globotriaosylceramides, and globotetraosylceramides are neutral membrane glycosphingolipids that contain a saccharide moiety attached to a ceramide containing N-acyl hydroxy or non-hydroxy fatty acids. These glycosphingolipids have roles in synaptic signaling and immune activation and accumulate in a variety of lysosomal storage disorders, including Fabry and Krabbe diseases.<sup>1-4</sup> Neutral Glycosphingolipid Mixture contains hydroxy- and non-hydroxy galactosylceramides, lactosylceramides, globotriaosylceramides, and globotetraosylceramides. It is intended for use as a reference standard for the detection of these glycosphingolipids in a variety of samples by TLC, LC-, or GC-MS.
