# PRODUCT INFORMATION

## Moronic Acid

Item No. 30654

**CAS Registry No.:** 6713-27-5  
**Formal Name:** 3-oxo-olean-18-en-28-oic acid  
**Synonyms:** Ambronic Acid, (+)-Moronic Acid, 3-Oxoolean-18-en-28-oic Acid  
**MF:** C<sub>30</sub>H<sub>46</sub>O<sub>3</sub>  
**FW:** 454.7  
**Purity:** ≥98%  
**Supplied as:** A solid  
**Storage:** -20°C  
**Stability:** ≥4 years  
**Item Origin:** Synthetic

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Moronic acid is supplied as a solid. A stock solution may be made by dissolving the moronic acid in the solvent of choice, which should be purged with an inert gas. Moronic acid is sparingly soluble (1-10 mg/ml) in chloroform and slightly soluble (0.1-1 mg/ml) in methanol

### Description

Moronic acid is a triterpenoid that has been found in *M. euosma* and has diverse biological activities.<sup>1-4</sup> It inhibits  $\alpha$ -glucosidase and  $\alpha$ -amylase ( $IC_{50}$ s = 10.57 and 20.08  $\mu$ g/ml, respectively).<sup>1</sup> Moronic acid inhibits the replication of HIV-1 in H9 T cells ( $EC_{50}$  = <0.1  $\mu$ g/ml).<sup>2</sup> It decreases intestinal macrophage infiltration and the levels of Tnf- $\alpha$ , Il-6, and Il-1 $\beta$  in a mouse model of chronic colitis induced by the sulfated polysaccharide dextran sulfate (DSS; Item No. 23250).<sup>3</sup> Moronic acid inhibits ear edema induced by the PKC activator 12-O-tetradecanoylphorbol-13-acetate (TPA; Item No. 10008014) in mice ( $ID_{50}$  = 379 nmol/ear). It also reduces the number of tumors per mouse and the percentage of mice with tumors in a two-stage mouse skin model of tumor formation initiated and promoted by the polycyclic aromatic hydrocarbon (PAH) 7,12-dimethylbenz[a]anthracene (DMBA; Item No. 30383) and TPA, respectively.<sup>4</sup>
