### Laboratory Procedures

Macranthoidin B is supplied as a crystalline solid. A stock solution may be made by dissolving the macranthoidin B in the solvent of choice, which should be purged with an inert gas. Macranthoidin B is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of macranthoidin B in these solvents is approximately 30 mg/ml.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of macranthoidin B can be prepared by directly dissolving the crystalline solid in aqueous buffers. The solubility of macranthoidin B in PBS, pH 7.2, is approximately 5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

### Description

Macranthoidin B is a triterpenoid saponin that has been found in *Lonicerae* and has anticancer activity.<sup>1</sup> It increases the production of reactive oxygen species (ROS) and induces apoptosis in HCT116 cells when used at concentrations ranging from 20 to 400  $\mu$ M.
