Laboratory Procedures

Anagrelide-¹³C₃ is supplied as a solid. A stock solution may be made by dissolving the anagrelide-¹³C₃ in the solvent of choice, which should be purged with an inert gas. Anagrelide-¹³C₃ is soluble in DMSO.

Description

Anagrelide-¹³C₃ is intended for use as an internal standard for the quantification of anagrelide (Item No. 21411) by GC- or LC-MS. Anagrelide is an inhibitor of phosphodiesterase 3 (PDE3; IC₅₀ = 36 nM for the human platelet enzyme).¹ It inhibits thrombopoietin-induced megakaryocytogenesis of isolated human CD34⁺ progenitor cells (IC₅₀ = 26 nM).² Anagrelide reduces platelet aggregation induced by ADP, collagen, thrombin, or arachidonic acid (Item Nos. 90010 | 90010.1 | 10006607) in isolated rabbit platelet rich-plasma (EC₅₀s = 0.31, 0.08, 0.18, and 0.1 µg/ml, respectively).³ It inhibits platelet thrombus formation in a dog model of electrically induced carotid artery thrombosis when administered at doses ranging from 0.5 to 5 mg/kg.⁴ Formulations containing anagrelide have been used in the treatment of thrombocytopenia.
