Laboratory Procedures

Aliskiren-d₆ (hemifumarate) is intended for use as an internal standard for the quantification of aliskiren (Item No. 19640) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Aliskiren-d₆ (hemifumarate) is supplied as a solid. A stock solution may be made by dissolving the aliskiren-d₆ (hemifumarate) in the solvent of choice, which should be purged with an inert gas. Aliskiren-d₆ (hemifumarate) is soluble in methanol and DMSO.

Description

Aliskiren is a nonpeptide inhibitor of renin (IC₅₀ = 0.6 nM for the human enzyme).¹ Aliskiren (10 and 30 mg/kg per day) reduces blood pressure and prevents albuminuria in renin-overexpressing TG(mRen-2)27 rats in a model of streptozotocin-induced diabetes.² It also reduces cardiac hypertrophy and fibrosis induced by heart pressure overload in mice.³ Formulations containing aliskiren have been used in the treatment of hypertension.
