Laboratory Procedures

Triclabendazole-¹³C-d₃ is intended for use as an internal standard for the quantification of triclabendazole (Item No. 18883) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Triclabendazole-¹³C-d₃ is supplied as a solid. A stock solution may be made by dissolving the triclabendazole-¹³C-d₃ in the solvent of choice, which should be purged with an inert gas. Triclabendazole-¹³C-d₃ is soluble in acetonitrile, DMSO, and methanol.

Description

Triclabendazole is a benzimidazole anthelmintic.¹ It eliminates both immature and adult flukes in a sheep model of *F. hepatica* infection when administered at a dose of 10 mg/kg.² Triclabendazole (5 μM) also protects against glucose- or α-synuclein-induced apoptosis in *S. cerevisiae* via inhibition of adenylyl cyclase in the Ras-adenylyl cyclase-protein kinase A (PKA) nutrient sensing pathway.³
