### Laboratory Procedures

Oroxin A is supplied as a solid. A stock solution may be made by dissolving the oroxin A in the solvent of choice, which should be purged with an inert gas. Oroxin A is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of oroxin A in these solvents is approximately 1 mg/ml.

Oroxin A is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, oroxin A should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. Oroxin A has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

### Description

Oroxin A is a flavonoid glycoside that has been found in *O. indicum*.<sup>1</sup>
