## Laboratory Procedures

BMS 963272 is supplied as a solid. A stock solution may be made by dissolving the BMS 963272 in the solvent of choice, which should be purged with an inert gas. BMS 963272 is soluble in the organic solvent DMSO.

## Description

BMS 963272 is an inhibitor of monoacylglycerol acyltransferase 2 (MGAT-2; IC<sub>50</sub> = 7.1 nM).<sup>1</sup> It is selective for MGAT-2 over MGAT-3, acyl-CoA wax alcohol acyltransferase 2 (AWAT2), and diacylglycerol acyltransferase 2 (DGAT-2; IC<sub>50</sub>s = >33 μM for all). *In vivo*, BMS 963272 (30 mg/kg) reduces body weight gain and food intake in a wild-type but not *Mogat2*<sup>-/-</sup> mouse model of high-fat diet-induced obesity. BMS 963272 (0.3 and 3 mg/kg) reduces plasma alanine transaminase (ALT), aspartate aminotransferase (AST), and bile acid levels and hepatic fibrosis in a mouse model of non-alcoholic steatohepatitis (NASH) induced by a choline-deficient and high-fat diet (CDAHFD).<sup>2</sup>
