Laboratory Procedures

Galantamine (hydrobromide) is supplied as a solid. Aqueous solutions of galantamine (hydrobromide) can be prepared by directly dissolving the solid in aqueous buffers. The solubility of galantamine (hydrobromide) in PBS (pH 7.2) is approximately 2 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description

Galantamine is an alkaloid that has been found in *Galanthus* and has acetylcholinesterase (AChE) inhibitory and nicotinic acetylcholine receptor (nAChR) potentiating activities.¹⁻³ It selectively inhibits AChE over butyrylcholinesterase (BChE; IC₅₀s = 636 and 8,404 nM, respectively).² Galantamine (0.5 μM) potentiates ACh-induced currents in HEK293 cells expressing human α4β2 subunit-containing nAChRs. *In vivo*, galantamine (1.3 mg/kg per day) decreases escape latency and path length in the Morris water maze in the APP23 transgenic mouse model of Alzheimer's disease.⁴ Formulations containing galantamine have been used in the treatment of Alzheimer's disease.
