### Laboratory Procedures

Esmolol acid (hydrochloride) is supplied as a solid. Aqueous solutions of esmolol acid (hydrochloride) can be prepared by directly dissolving the solid in aqueous buffers. The solubility of esmolol acid (hydrochloride) in PBS (pH 7.2) is approximately 5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

### Description

Esmolol acid is an active metabolite of the β<sub>1</sub>-adrenergic receptor (β<sub>1</sub>-AR) antagonist esmolol (Item No. 22581).<sup>1</sup> It is formed from esmolol via hydrolysis by a red blood cell esterase. Esmolol acid inhibits isoproterenol-induced increases in the beating rate of isolated guinea pig right atria (pA<sub>2</sub> = 3.73) and prevents tachycardia and hypotension induced by isoproterenol (Item No. 15592) in anesthetized dogs in a dose-dependent manner.<sup>2</sup> It is also a potential impurity in commercial preparations of esmolol.<sup>3</sup>
