PRODUCT INFORMATION

11 β -Hydroxyprogesterone

Item No. 36031

CAS Registry No.: 600-57-7
Formal Name: 11 β -hydroxy-pregn-4-ene-3,20-dione
Synonyms: 21-Deoxycorticosterone, 11 β -OHP, 11 β -hydroxy Progesterone, NSC 15469, U-1701
MF: C₂₁H₃₀O₃
FW: 330.5
Purity: \geq 98%
Supplied as: A solid
Storage: -20°C
Stability: \geq 4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

11 β -Hydroxyprogesterone (11 β -OHP) is supplied as a solid. A stock solution may be made by dissolving the 11 β -OHP in the solvent of choice, which should be purged with an inert gas. 11 β -OHP is slightly soluble in acetone, chloroform, and methanol.

Description

11 β -OHP is a metabolite of progesterone (Item No. 15876).¹ It is an agonist of the mineralocorticoid receptor (MR) that induces MR transactivation in a reporter assay (EC₅₀ = 0.05 μ M for COS-7 cells expressing the human receptor).² It increases sodium absorption in mpkCCDc14 murine renal cortical collecting duct cells. 11 β -OHP is an inhibitor of 11 β -hydroxysteroid dehydrogenase type 2 (11 β -HSD2) and 11 β -HSD1 (IC₅₀s = 0.140 and 1 μ M, respectively).³ It increases blood pressure in rats when administered subcutaneously at a rate of 10 μ g/hour.⁴ Serum levels of 11 β -OHP are increased in patients with 21-hydroxylase deficiency, a type of congenital adrenal hyperplasia (CAH), characterized by masculinized genitals in female infants, irregular menses in adult females, and accelerated bone age in adolescent males.⁵
