PRODUCT INFORMATION

Sulfamethazine-d₄

Item No. 36575

CAS Registry No.: 1020719-82-7
Formal Name: 4-amino-N-(4,6-dimethyl-2-pyrimidinyl)-benzene-2,3,5,6-d₄-sulfonamide
Synonyms: Sulfadimethyldiazine-d₄, Sulfadimidine-d₄
MF: C₁₂H₁₀D₄N₄O₂S
FW: 282.4
Chemical Purity: ≥98% Sulfamethazine
Deuterium Incorporation: ≥99% deuterated forms (d₁-d₄); ≤1% d₀
Supplied as: A solid
Storage: -20°C
Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Sulfamethazine-d₄ is intended for use as an internal standard for the quantification of sulfamethazine (Item No. 20976) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated *versus* unlabeled).

Sulfamethazine-d₄ is supplied as a solid. A stock solution may be made by dissolving the sulfamethazine-d₄ in the solvent of choice, which should be purged with an inert gas. Sulfamethazine-d₄ is slightly soluble in DMSO and methanol (warmed).

Description

Sulfamethazine is a sulfonamide antibiotic.^{1,2} It inhibits dihydropteroate synthase (DHPS; IC₅₀ = 5.7 μM for the *T. gondii* enzyme). Sulfamethazine is active against *A. pleuropneumoniae* (MIC = 32 μg/ml) and enhances the antibacterial activity of trimethoprim (Item No. 16473) against *E. coli*.^{3,4} It has been detected in environmental water samples.^{5,6} Formulations containing sulfamethazine have been used in the treatment of bacterial infections in livestock.
