PRODUCT INFORMATION

Asaraldehyde

Item No. 36798

CAS Registry No.: Formal Name	4460-86-0 2 4 5-trimethoxy-benzaldebyde	
Supersumes	Assemble Assemble Assemble NEC 20200	
Synonyms:	Asaronaidenyde, Asarylaidenyde, NSC 89299,	
	2,4,5-trimethoxybenzaldehyde	.0. .0.
MF:	C ₁₀ H ₁₂ O ₄	
FW:	196.2	
Purity:	≥98%	
UV/Vis.:	λ _{max} : 236, 275, 342 nm	0
Supplied as:	A solid	
Storage:	-20°C	
Stability:	≥4 years	
Item Origin:	Synthetic	
Information represents the product specifications. Batch specific analytical results are provided on each certificate of analy		

Laboratory Procedures

Asaraldehyde is supplied as a solid. A stock solution may be made by dissolving the asaraldehyde in the solvent of choice, which should be purged with an inert gas. Asaraldehyde is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of asaraldehyde in these solvents is approximately 10, 30, and 25 mg/ml, respectively.

Description

Asaraldehyde is a plant metabolite that has been found in *D. carota* and has diverse biological activities.¹⁻⁴ It selectively inhibits COX-2 over COX-1 when used at a concentration of 100 μ g/ml and inhibits aggregation of washed isolated rabbit platelet-rich plasma induced by arachidonic acid (Item Nos. 90010 | 90010.1 | 10006607) or collagen (IC₅₀s = 53.7 and 27.6 μ M, respectively).^{1,2} Asaraldehyde (1 mg/disc) is active against C. perfringens and C. difficile.² It decreases triglyceride, perilipin 1, and leptin levels and increases glycerol and hormone-sensitive lipase (HSL) levels in differentiated 3T3-L1 mouse adipocytes, as well as enhances osteogenesis induced by osteogenic differentiation medium in primary human periodontal ligament stem cells when used at a concentration of 100 μ g/ml.^{3,4} Asaraldehyde has been used as a building block in the synthesis of various chalcones and flavonoids with anticancer and antioxidant activities.⁵
