Laboratory Procedures

Parathyroid hormone (PTH) (1-34) (rat) (acetate) is supplied as a solid. A stock solution may be made by dissolving the PTH (1-34) (rat) (acetate) in water. We do not recommend storing the aqueous solution for more than one day.

Description

PTH (1-34) is a synthetic N-terminal fragment of PTH that corresponds to amino acids 1-34 of mature PTH and a PTH receptor agonist.^{1,2} It induces β -arrestin recruitment in HEK293H cells expressing human PTH receptor type 1 (PTH1R; EC₅₀ = 7.7 nM) and adenylyl cyclase activation in COS-7 cells expressing rat PTH2R (EC₅₀ = 0.41 nM). PTH (1-34) (100 nM) induces hypertrophy of primary rat ventricular cardiomyocytes.³ It increases tibial bone mineral density in ovariectomized rats when administered at a dose of 5 μ g/kg.⁴
