### Laboratory Procedures

Cholesteryl linoleate-d<sub>11</sub> is intended for use as an internal standard for the quantification of cholesteryl linoleate (Item No. 22597) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

### Description

Cholesteryl linoleate is a pro-atherogenic cholesterol ester.<sup>1,2</sup> It has been found in the plasma membrane of macrophages as a component of LDL, where it undergoes oxidation to form cholesteryl linoleate hydroperoxides (Item No. 48001).<sup>1</sup> Cholesteryl linoleate levels are increased in apoB-lipoproteins and positively correlated with hepatic cholesterol levels and the number of atherosclerotic lesions in transgenic mice overexpressing human ABCA1.<sup>2</sup> Lipoprotein levels of cholesteryl linoleate are increased and associated with lipid radical formation in patients with β-thalassemia.<sup>3</sup>
