### Laboratory Procedures

Sofpironium (bromide) is supplied as a solid. A stock solution may be made by dissolving the sofpiroonium (bromide) in the solvent of choice, which should be purged with an inert gas. Sofpironium (bromide) is slightly soluble in acetonitrile.

Sofpironium (bromide) is slightly soluble in aqueous solutions. To enhance aqueous solubility, dilute the organic solvent solution into aqueous buffers or isotonic saline. If performing biological experiments, ensure the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. We do not recommend storing the aqueous solution for more than one day.

### Description

Sofpironium is a derivative of the muscarinic acetylcholine receptor antagonist glycopyrrolate (Item No. 16498).<sup>1</sup> Formulations containing sofpiroonium have been used in the treatment of hyperhidrosis.
