Description

PAMAM dendrimer G3.0 amidoethanol (PAMAM G3.0 amidoethanol) is a polyamidoamine (PAMAM) dendrimer with hydroxyl termini.¹ It is approximately 30 Å in diameter in PBS and has 32 surface groups. PAMAM G3.0 amidoethanol is an antagonist for the pore-forming channels anthrax protective antigen 63 (PA63) in lipid membranes ($IC_{50} = 44.9$ nM).² It inhibits aggregation of amylin containing a serine-to-glycine substitution at position 20 (amylin^{S20G}) in a concentration-dependent manner and amylin^{S20G}-induced toxicity in MIN6-K8 and NIT-1 pancreatic β-cells at 6 μM.³ Topical application of PAMAM G3.0 amidoethanol (1 mg/ml) encapsulating the synthetic glucocorticoid dexamethasone (Item No. 11015) increases the levels of dexamethasone in the sclera, conjunctiva, and cornea in isolated rabbit eyes.⁴ It reduces tail growth in *C. riparius* larvae and induces DNA damage in a comet assay using *C. riparius* larval homogenates when used at concentrations of 10 or 100 ppm.⁵
