PRODUCT INFORMATION

GPX1 (human, recombinant)

Item No. 39629

Overview and Properties

Synonyms: Glutathione Peroxidase 1, GPXD, GSHPX1
Source: Active recombinant human GPX1 expressed in *E. coli*
Amino Acids: 203 residues
Storage: -20°C (as supplied)
Stability: ≥1 year
Purity: ≥95% estimated by SDS-PAGE
Supplied in: 25 mM Tris-HCl, pH 8.0, with 250 mM potassium chloride, 2 mM 2-mercaptoethanol, and 10% glycerol

Protein

Concentration: 1 mg/ml

Unit Definition: One unit is defined as the amount of enzyme required to consume 1 μmol GSH per minute in a glutathione reductase-coupled GPx assay with 1 mM GSH, 0.5 mM cumene hydroperoxide, 15 mM human glutathione reductase, and 0.3 NADPH in TE buffer (50 nM Tris-HCl, 2 mM EDTA, pH 7.5)

Special Conditions: Centrifuge tube briefly before opening

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

of 10 μg GPX1.

WARNING
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA
This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the [complete](#) Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY
Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

PRODUCT INFORMATION

Description

Glutathione peroxidase 1 (GPX1) is a selenocysteine-containing glutathione peroxidase with antioxidant activity.¹ It is ubiquitously expressed and localizes to both the cytosol and mitochondria.² GPX1 catalyzes the reduction of hydrogen peroxide, hydroperoxy fatty acids, and hydroperoxy lysophosphatides to water or their corresponding non-toxic lipid alcohols, respectively, by converting glutathione (GSH) to oxidized glutathione (GSSG), thereby reducing intracellular oxidative stress.¹⁻³ GPX1 levels are increased in renal cell carcinoma tumors compared with non-tumor renal tissue and correlated with decreased overall patient survival.⁴ Plasma levels of GPX1 are decreased in asthmatic patients and GPX1 SNPs are associated with an increased risk of the development of asthma.⁵ Cardiac GPX1 levels and whole blood GPX1 activity are decreased in patients with Keshan disease, an endemic cardiomyopathy associated with low selenium levels in the soil and food supply.⁶ Cayman's GPX1 (human, recombinant) protein can be used for enzyme activity assays.
