Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Dotinurad is supplied as a solid. A stock solution may be made by dissolving the dotinurad in the solvent of choice, which should be purged with an inert gas. Dotinurad is sparingly soluble (1-10 mg/ml) in DMSO.

Description

Dotinurad is a urate transporter 1 (URAT1) antagonist (IC₅₀ = 0.0372 μM).¹ It is selective for URAT1 over ATP-binding cassette subfamily G member 2 (ABCG2), organic anion transporter 1 (OAT1), and OAT3 (IC₅₀s = 4.16, 4.08, and 1.32 μM, respectively). *In vivo*, dotinurad (30 mg/kg) decreases plasma levels of urate and increases urine levels of urate in *Cebus* monkeys. Formulations containing dotinurad have been used in the treatment of hyperuricemia and gout.
