Laboratory Procedures

DDO-5936 is supplied as a solid. A stock solution may be made by dissolving the DDO-5936 in the solvent of choice, which should be purged with an inert gas. DDO-5936 is sparingly soluble (1-10 mg/ml) in DMSO and slightly soluble (0.1-1 mg/ml) in chloroform and acetonitrile.

Description

DDO-5936 is an inhibitor of the protein-protein interaction between heat shock protein 90 (Hsp90) and cell division cycle 37 (Cdc37).¹ It inhibits the Hsp90-Cdc37 interaction in HCT116 human colorectal cancer cells when used at concentrations of 5, 10, and 25 μ M. DDO-5936 is selective for inhibition of the Hsp90-Cdc37 interaction over inhibition of 20 kinases (IC_{50} s = >100 μ M for all) and inhibits the proliferation of HCT116 cells (IC_{50} = 8.99 μ M). It also reduces the levels of the Hsp90 kinase client Cdk4 and induces cell cycle arrest at the G₀/G₁ phase in a Cdc37-dependent manner in HCT116 cells when used at concentrations of 10 and 25 μ M. DDO-5936 (50 and 100 mg/kg per day) reduces tumor growth and tumor weight in an HCT116 mouse xenograft model.
